

High quality CPR real time feedback

The Brayden Pro provides healthcare professionals with quantitative data driven feedback. This can be used to enable students to improve their CPR performance when a data driven need is required. Brayden Pro provides students with real time feedback during CPR training and also enables detailed post CPR training debriefing by providing quantitative data of key CPR parameters as outlined in the ERC 2015 Guidelines such as compression depth, compression rate, hand position and compression release. Feedback on hands off time and ventilation performance is also provided from the Brayden Pro manikin.

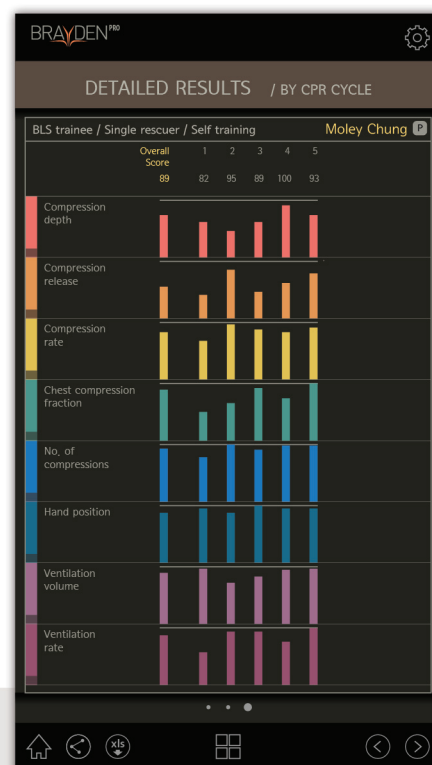

Real time CPR Feedback

- Up to 6 manikins can be monitored at one time
- Connected via Bluetooth
- Intuitive app & feedback screens

Objective analysis & debriefing

- Timeline of assessed performance measured through 8 key CPR metrics
- Quantitative analysis of key CPR metrics for debriefing
- Can be configured to AHA and ERC (2015) Guidelines

Overall CPR Quality Score calculated & presented over time

- Objective CPR metrics available as complete event & by individual CPR cycle
- Android based - data can be exported

High quality CPR real time feedback

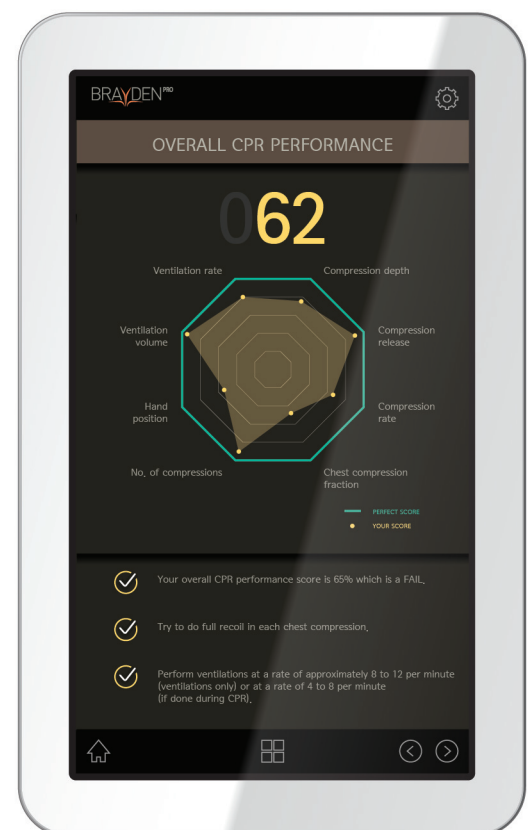

Professor Douglas Chamberlain said of the Brayden Pro:

"The Bluetooth link between the impressive Brayden Pro manikin and the app on an android tablet greatly enhances the training value of the system. It gives not only an immediate guide to the quality of compressions, but also offers trends and a permanent record of what is being achieved. It would be hard to rival as a training system."

Advanced CPR Coaching

- Quality Score using algorithm determined by leading European Opinion Leaders
- Can be configured for AHA & ERC (2015) Guidelines
- Can be set for differing responder skill level - Healthcare Professional or Layperson
- Can be set for one or two responder scenario
- Can be set for ventilation only and compression only
- Tested & Evaluated by European in-hospital & pre-hospital resuscitation experts

"The Brayden Pro is a breath of fresh air in the world of resuscitation. the pedagogical feedback mechanism though direct visual LED lights & the link to the Android tablet platform gives a superb development in auditing the student and giving them a clear understanding of direct and future learning. The equipment is easy to use and has not been overcomplicated by unnecessary bells and whistles. Highly recommended and a great addition to the tutors armoury at a realistic price" (Bob Fellows, Pre-hospital Healthcare Expert)

"The Brayden Pro is a cost effective CPR training manikin for healthcare professionals. Clinical staff require more precise skills training. This upgraded Brayden manikin with tablet can deliver accurate real time and post event feedback. The tablet software displays detailed information of both compressions and ventilation in a very user friendly way. This allows precise individualised feedback. This is a welcome addition to the developing Brayden Manikin." (Rob Morrison, In-Hospital Professional)
